PROFESSIONAL SUMMARY

Operations data analyst with **4+ years** across logistics, distribution and billing. I build tools that teams use every day: a **Power BI pick-up orders dashboard** with order traceability, **SLA-based alerts** and a self-refreshing database; my own **e-invoicing app** that does in 4 minutes what took over 16 hours; and a **Power App** that generates pick-up orders. Hands-on with **SQL**, **Python (pandas)**, **Power BI (DAX)**, **Power Automate** and **Power Apps**, working on logistics processes in **SAP**.

WORK EXPERIENCE

Transportation & Logistics Analyst

Penguin Random House | Apr 2026 – Present

- Built the Power BI pick-up orders dashboard used across the operations area: order traceability, critical status by each carrier's SLA, and automated email alerts (about 7 a day).
- Automated the daily refresh of the pick-up orders database with Excel cross-checks. That data backed SLA penalties for carriers (with exceptions); the regional carrier went from ~22 to ~18 days.
- For Market Self (a group company), built a Power App where merchandisers log each pick-up and the order PDF is generated for the carrier. It used to take 4–5 min per order, 6 to 10 a day (final rollout).
- Build Market Self's monthly KPI report in PowerPoint from SAP data and present it to the subsidiaries in Chile, Uruguay and Peru. From that analysis, I proposed combining local pick-ups with delivery routes, cutting dedicated pick-up vehicle costs by 60–70% a month.
- Manage delivery notes, proof of delivery and returns in SAP; coordinate the 3PL and regional carriers.

Billing & Automation Administrator (part-time)

Consultorio de Salud Ayres (medical practice) | 2022 – Present

- Bill about 200 patients per month to roughly 35 health insurers through ARCA (Argentina's tax agency) and insurer portals.
- Built my own e-invoicing app (Python, FastAPI, PostgreSQL), in production since Oct 2026: it issues the ~100 monthly invoices through ARCA in 4 minutes (vs. 16+ hours by hand) and files each PDF in Google Drive.

Owner & Operations Manager

Beverage Distribution Business | 2025 – Jan 2026

- Ran the entire operation single-handedly: about 100 local retail customers and 200 orders per week.
- Managed order intake, inventory, suppliers, daily delivery routes and electronic invoicing.

Operations & Documentation Administrator

Autobuses S.A. | 2023 – Feb 2025

- Managed documentation for a fleet of 120+ buses, assigned maintenance tasks and reported fleet status to management.

TECHNICAL SKILLS

- SQL (PostgreSQL, MySQL)
- Power Automate
- FastAPI & REST APIs
- Python (pandas, NumPy)
- Advanced Excel & PowerPoint
- Git
- Power BI (DAX, Power Query)
- SAP (logistics documents)
- Power Apps

EDUCATION

Computer Systems Engineering

Universidad Abierta Interamericana | 3 years completed

- **SQL & Power BI for Data Analysis** – Platzi
- **Python & pandas for Data Analysis** – Coderhouse

LANGUAGES

Spanish: native
English: B2 (fluent reading and listening)
